Ensure nothing really happens.

Bosch CONETTIX B6800 Central Station Software Receiver

Bosch CONETTIX B6800 Central Station Software Receiver

Easy to configure, operate and maintain

Fast, accurate, reliable response to emergency events is the key to ensuring security. The CONETTIX B6800-SR Software Central Station Receiver is the heart of your alarm communication system. B6800-SR is a software-based IP receiving platform that features Bosch's award winning CONETTIX IP alarm communication technology to receive alarm messages, process the data quickly and securely pass the information on to your choice of monitoring automation software. Operating on commercial off-the-shelf Windows software, B6800-SR is simple to install, simple to use and simple to maintain.

A browser-based user interface means that there is no special software to install on your operators' workstations. Multiple operators can maintain your database simultaneously, greatly streamlining operation – especially in large monitoring centers. B6800-SR operates on your computers, so there is no proprietary hardware to buy or maintain. With flexible licensing for up to 10,500 alarm accounts, B6800-SR has the scalability to support small, medium and large monitoring centers.

With the CONETTIX B6800-SR Software Central Station Receiver, you experience state of the art technology to allow you to provide peace of mind. It's like nothing really happens.
